Experience

Shopify

Product Data Scientist, Digital Products

Apr 2026 – Present

- Measured impact of the Digital Downloads App onboarding guide (+10.8% lift in merchants adding their first product, **\$2M in projected 10-year revenue**) and recommended a targeted re-engagement campaign for 15K in-progress merchants
- Built a reviews dashboard integrating App Store reviews, support tickets, and in-product feedback, informing feature prioritization (e.g., order search) for **260K+ active users**

Product Data Scientist, Monetization

Jan 2026 – Apr 2026

- Owned 5 end-to-end experiments across the monetization funnel (signup, checkout, cancellation), quantifying the impact of product changes to leadership through hypothesis design, instrumentation, execution, and analysis
- Recommended enhancements to the Shopify Subscriptions App to unlock **\$438M+ in annual Gross Merchandise Value (GMV)** by analyzing merchant behaviour across 6 industries
- Identified bot activity in a sign-up flow A/B test that understated the visitor-to-customer conversion lift by **9.1%**, **reversing the cancellation of the new flow in Europe**
- Built AI-native onboarding tooling accelerating data scientist ramp-up time, and authored educational content on e-values to drive company-wide sequential testing adoption

Capital One

Process Manager, Rewards & Risk-Based Pricing

Sept 2025 – Jan 2026

- Led the rollout of in-app rewards redemption with Product and Strategy, validating A/B test results and authoring the credit decision driving **\$4.7MM in annual revenue** and **2,200 fewer agent calls**, translating to **\$8.8K in operational savings**
- Built an automated risk-based pricing triage system (SQL) to identify mispriced accounts, reducing **1 day of manual work to a 2-minute query** and identifying **\$1K+ in overcharged** customer interest per month

Process Manager, Canada Card Fulfillment

Sept 2024 – Dec 2024

- Built and automated data pipelines to develop a KPI monitoring dashboard in AWS QuickSight using Snowflake data, **reducing daily manual processing time by 86%** and enabling real-time decision-making
- Implemented a company-wide initiative to automate quality control chart creation using Python (pandas, plotly), enabling proactive process health monitoring

Process Manager, Credit Limit Increase Program

May 2023 – Aug 2023

- Analyzed data and logic pipelines to identify bottlenecks, then presented a process binder (Dashboards, SIPOCs, Swimlanes, FMEA, Control Plan) **recommending a shift from monthly to daily credit limit decisions**
- Developed a dashboard on Snowflake to monitor the **impact of credit limit increases on the secured card customer** population

Loblaw Digital

Data Analyst, PC Optimum

Jan 2024 – May 2024

- Led the analysis and launch of a new offer type for PC Optimum members, resulting in **4% increase in WAU** for the test group
- Built onboarding offer sets that drove a **3% lift in offer redemption**, strengthening early customer retention in the first 4 weeks

Projects

Urban Heat Island Explorer

Apr 2026

Data Maps & Visualizations

- Analyzed NASA's Landsat satellite data to map Toronto's urban heat island effect, building an interactive dashboard and calculator
- Raised awareness through a blog post on thebraindump (1.1K+ reads), encouraging readers to advocate for community cooling initiatives

On-Ball Value (OBV) Model for Women's Football

Aug 2025

2025 Women's Euros

- Shipped an interactive dashboard (pandas, plotly, Streamlit, sk-learn) to display team and player level performance analysis
- Wrote a jargon-free blog post on thebraindump (3.2k+ reads) to drive understanding and interest in Women's Football

UberAds Portal

Apr 2024 – Apr 2025

Engineering Capstone Project with Uber

- Developed an end-to-end advertising portal, unlocking live ad campaign tracking and bidding recommendations (XGBoost) for Uber Apps
- Designated client liaison fostering communication with the Programmatic Advertising and Partnerships Global team at Uber

Skills

Data: Experiment Design (A/B, Quasi-Experiments, ITS), Product Analytics, Data Pipelines (ETL), Predictive Model Development

Software: BigQuery, dbt, Airflow, Snowflake, Looker, AWS QuickSight, Marimo, Graphite, GitHub, Cursor, Claude Code

Languages: SQL, Python, R, Java, JavaScript, Excel (VBA, PowerQuery), JSON, HTML, CSS

Education

University of Waterloo

Sept 2020 – Apr 2025

BASc., Management Engineering, Computing Option

- Graduated with Distinction – Dean's Honour List (Top 10% of the Cohort)
